TITLE	United States Directory of Sources, United States International Environmental Referral Center. National Focal Point of the United Nations Environment Program/International Referral System.
INSTITUTION	Environmental Protection Agency, Washington, D. C.
REPORT NO	EPA-840-76-007
PUB DATE	Nov 76
NOTE	417p.
EDRS PRICE	MF-$0.83 HC-$22.09 Plus Postage.
DESCRIPTORS	*Directories; *Environment; *Environmental Research; *Information Sources; Natural Resources; Pollution; Techrology
IDENTIFIERS	*UNESCO

ABSTRACT

The United Nations Environment Program (UNEP) was created in 1972. UNEP is an independent agency of the United Nations and has its headquarters in Nairobi, Kenya. In order to carry out its goals, several programs were created, one of which is the International Referral System (UNEP/IRS). The UNEP/IRS is composed of over 60 national and international Focal Points. The U.S. Environmental Protection Agency serves as the U.S. National Focal Point. This directory includes sources registered as of September 1, 1976. The sources are intended to help users locate environmental information sources without consulting the National Focal Point. There are four sections in the directory: (1) Subject Attribute Listing; (2) Directory of Sources; (3) Alphabetical Listing of Sources; and (4) Geographical Listing of Sources by State and City. (RH)

****
* Documents acquired by ERIC include many informal unpublished materials not available from other sources. ERIC makes every effort to obtain the best copy available. Nevertheless, items of marginal reproducibility are often encountered and this affects the quality of the microfiche and hardcopy reproductions ERIC makes available via the ERIC Document Reproduction Service (EDRS). EDRS is not responsible for the quality of the original document. Reproductions supplied by EDRS are the best that can be made from the original. *

OFFICE INFORMATION	Inside Back Cover

INTRODUCTION

The United Nations Environment Program (UNEP) was created in 1972 as a direct result of the International Conference on Human Environment held in Stockholm, Sweden. UNEP is an independent agency of the United Nations and has its headquarters in Nairobi, Kenya. Its establishment evolved around three goals:

1. To promote international cooperation in the environmental field.

2. To keep under review the world environmental situation in order to assure that environmental problems of wide international significance receive appropriate consideration by governments.

3. To promote the acquistion, assessment, and exchange of environmental knowledge.

In order to assist in carrying out these goals, several programs were created within the UNEP structure, one of which is the International Referral System (UNEP/IRS). Composed of a network of over 60 national and international Focal Points, the International Referral System is engaged in identifying and registering sources of environmental information, transmitting these sources in a proper and unified format to the System's central data bank in Geneva, Switzerland, and serving as a point of contact for users who need referral services (National and International). The International Referral System is a referral service designed to link those who need environmental information with those who have the desired information.

In March 1975 the State Department designated the U. S. Environmental Protection Agency to serve as the U. S. National Focal Point and EPA formally opened its Center on October 6, 1975, at its Headquarters in Washington, D. C. The U. S. National Focal Point has been named the United States International Environmental Referral Center (USIERC).

This directory includes sources registered with the United States International Environmental Referral Center as of September 1, 1976. Source registration forms processed after that date will be included in the next edition which we propose to publish in 1977.

The sources in this directory have been submitted to the International Referral System of the United Nations Environment Program for its international directory.

This directory is intended to help users locate environmental information sources in the United States without having to contact USIERC. It is by no means a complete directory, since we are constantly adding to our data base. Over 3,500 United States organizations have been identified to date and invited to register. Registration is voluntary and we have only included those organizations who have already completed and submitted source registration forms to our office. This first directory includes 601 registered sources which are located in the United States. The types of organizations registered as sources include: Federal Agencies, State and Local Governments, Universities, Business, Industry, Societies and Associations, Laboratories, Information Centers, Consultants, Engineering Firms, and others.

Those individuals who need assistance in identifying international sources of information must contact USIERC for information.

HOW TO USE THE DIRECTORY

In order to provide maximum and efficient access to information on registered sources, the United States Directory is divided into four parts:

1. Section 1: Subject Attribute Listing
2. Section 2: Directory of Sources
3. Section 3: Alphabetical Listing of Registered Sources
4. Section 4: Geographical Listing of Registered Sources by State and City.

Section 1: Subject Attribute Listing

This section is alphabetized according to the specific environmental subjects which are included in the International Referral System's listing of subject attributes. Each page has double columns. The four-diget number to the right of each attribute is an international code so that those numbers can be used to identify the attributes in all languages. Printed under each subject or keyword is a listing of United States sources (by name and number) which have information in each specified area:

EXAMPLE: ABANDONED VEHICLES 4430

840160013	Environmental Protection Agency--Solid Waste Publications
840160014	Environmental Protection Agency--Solid Waste Management
840370006	National Research Council--Transportation Research Board

Once the specific subjects of interest have been identified in this Section, the next step is to turn to Section 2 to locate the sources and the pertinent information on each source.

Section 2: Directory of Sources

A source is a functional unit which has information or knowledge on a particular environmental topic or range of topics and is able and willing to provide adequate information to users. Several sources may have the same parent organization.

This section is a numeric double columned listing of 601 registered United States sources by their assigned identification numbers. Source identification numbers are nine digits in length: the first three numbers identify the Focal Point (840--United States); the next four numbers identify the parent organization or a major group of organizations (1600--EPA; 5000-Universities); the last two numbers identify the source (01-Region III--Library).

Underneath each source number is pertinent information about the particular source. Source information includes the following areas:

	Explanation of Term
A. Address (including Telephone, Telex and Cable numbers)	This address should be used when sending inquiries.
B. Source Description	A brief examination of the source's function and operation.

	Explanation of Term
C. Sponsorship/Community	Sponsorship indicates the major source of funding and/or control. Some sources may be funded by government through contract, but are otherwise independent. Therefore some sources will claim governmental and non-governmental sponsorship. Community represents the geographical area in which the sponsoring organization has significance.
D. Activities	Outlines the main occupation of the parent body. (The parent body is a clearly identifiable directing organization of the source which has in common with that source the fulfillment of certain objectives.) It is from these activities that a source derives its functions.
E. Function	This describes the capacity in which the source works. These functions are derived from the activities of the parent body.
F. Country	Outlines the geographic limitation on the area of competence of a source.
G. Language	Information on languages in which substantive information is held and/or may be provided.
H. Availability	The conditions under which information will be made available; restrictions and conditions normally applicable when information is supplied, including possible payment of fee.

	Explanation of Term
I. Output/Output Forms	The types of information which are available and the forms or formats in which it can be supplied.
J. Subject Attributes	Topics on which the source has available information or expertise. These are the descriptors used in matching the requirements of users to the holdings of sources.

Once a user has reviewed the information on the sources which were identified in Section 1 for a particular topic, the user can decide which sources to contact by reading the information in this section. Inquiries should be addressed to each relevant source stating precisely the information desired. It is suggested that telephone calls to sources be made only when material or information is urgently needed.

The numbers preceding word terms in this directory are international codes representing the meanings of the terms which they precede. These codes make it possible to communicate in any language by using numbers instead of words. However, in written communications, it is preferable for users and sources to use word terms to indicate need and supply of information. National Focal Points and others communicating by cable and wireless between different language areas may find the codes more convenient.

Section 3: Alphabetical Listing of Registered Sources

This section gives a complete alphabetical listing of all registered sources by organization and assigned source identification numbers. It can be most helpful in discovering whether a particular organization is registered. It is also useful in finding source identification numbers when these are not known. If specific information is desired about a particular organization, then, it can be found in Section 2 by using the exact source number.

Section 4: Geographical Listing of Registered Sources by State and City

This Section is a compliation of registered sources arranged alphabetically by State and U. S. Territory under the city in which the source is located. Registration includes the name of the organization, the unit comprising the source, and the source identification number. The information in this section gives a geographic view of the location of registered environmental information sources in the United States. It also provides means of locating a specific organization within a state and could be helpful in determining what unit of an organization in a given city is the source for environmental information.
